Belonging in college & STEM

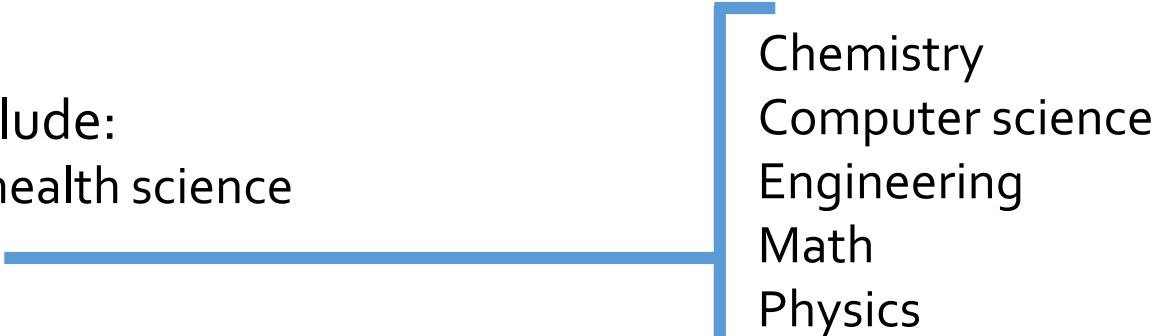

Belonging refers to one's feeling of membership and acceptance in their field.¹

Sense of belonging is

- ❖ Correlated to both achievement and retention of underrepresented students
- ❖ Context-dependent

[1] Good, C. et al. *Journal of personality and social psychology* 102.4 (2012): 700.

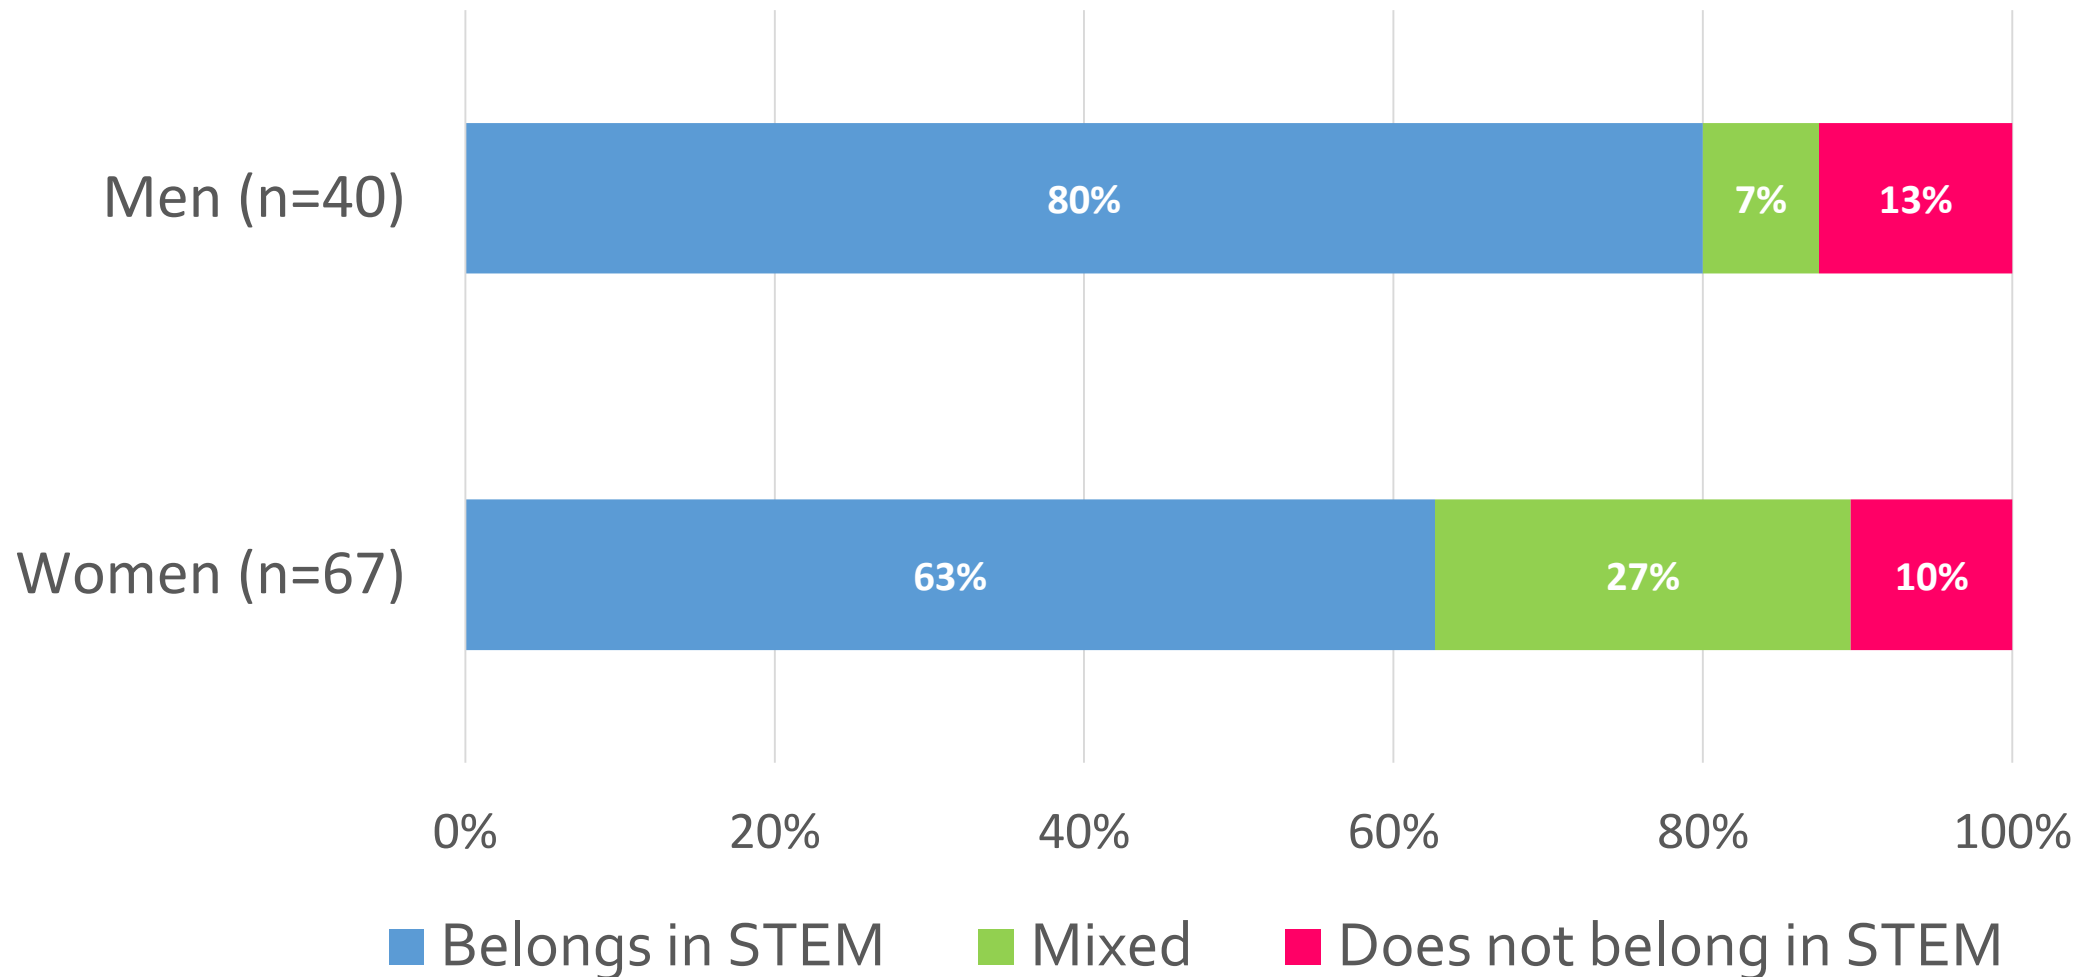

Data collection: interviews

- Interviews conducted with 317 college seniors within the North Carolina higher education system.
 - Looked at the 107 who were STEM majors
 - Majors include:
 - Biology/health science
 - pSTEM
- 
- Chemistry
 - Computer science
 - Engineering
 - Math
 - Physics

Students were asked the question(s):

- ❖ **Do you feel like you belong in your major? Did you ever feel out of place?**

Belonging by gender

Reasons cited for not belonging in STEM

Lacks social identity

"[Other students] seemed to click with everybody else about stuff ... They would talk to me but I kind of felt like these people really aren't my people."

Lacks personal interest

"I enjoy [my major] but if I'm going to have to do something for the rest of my life, I want to ... thoroughly enjoy it and have a passion for it."

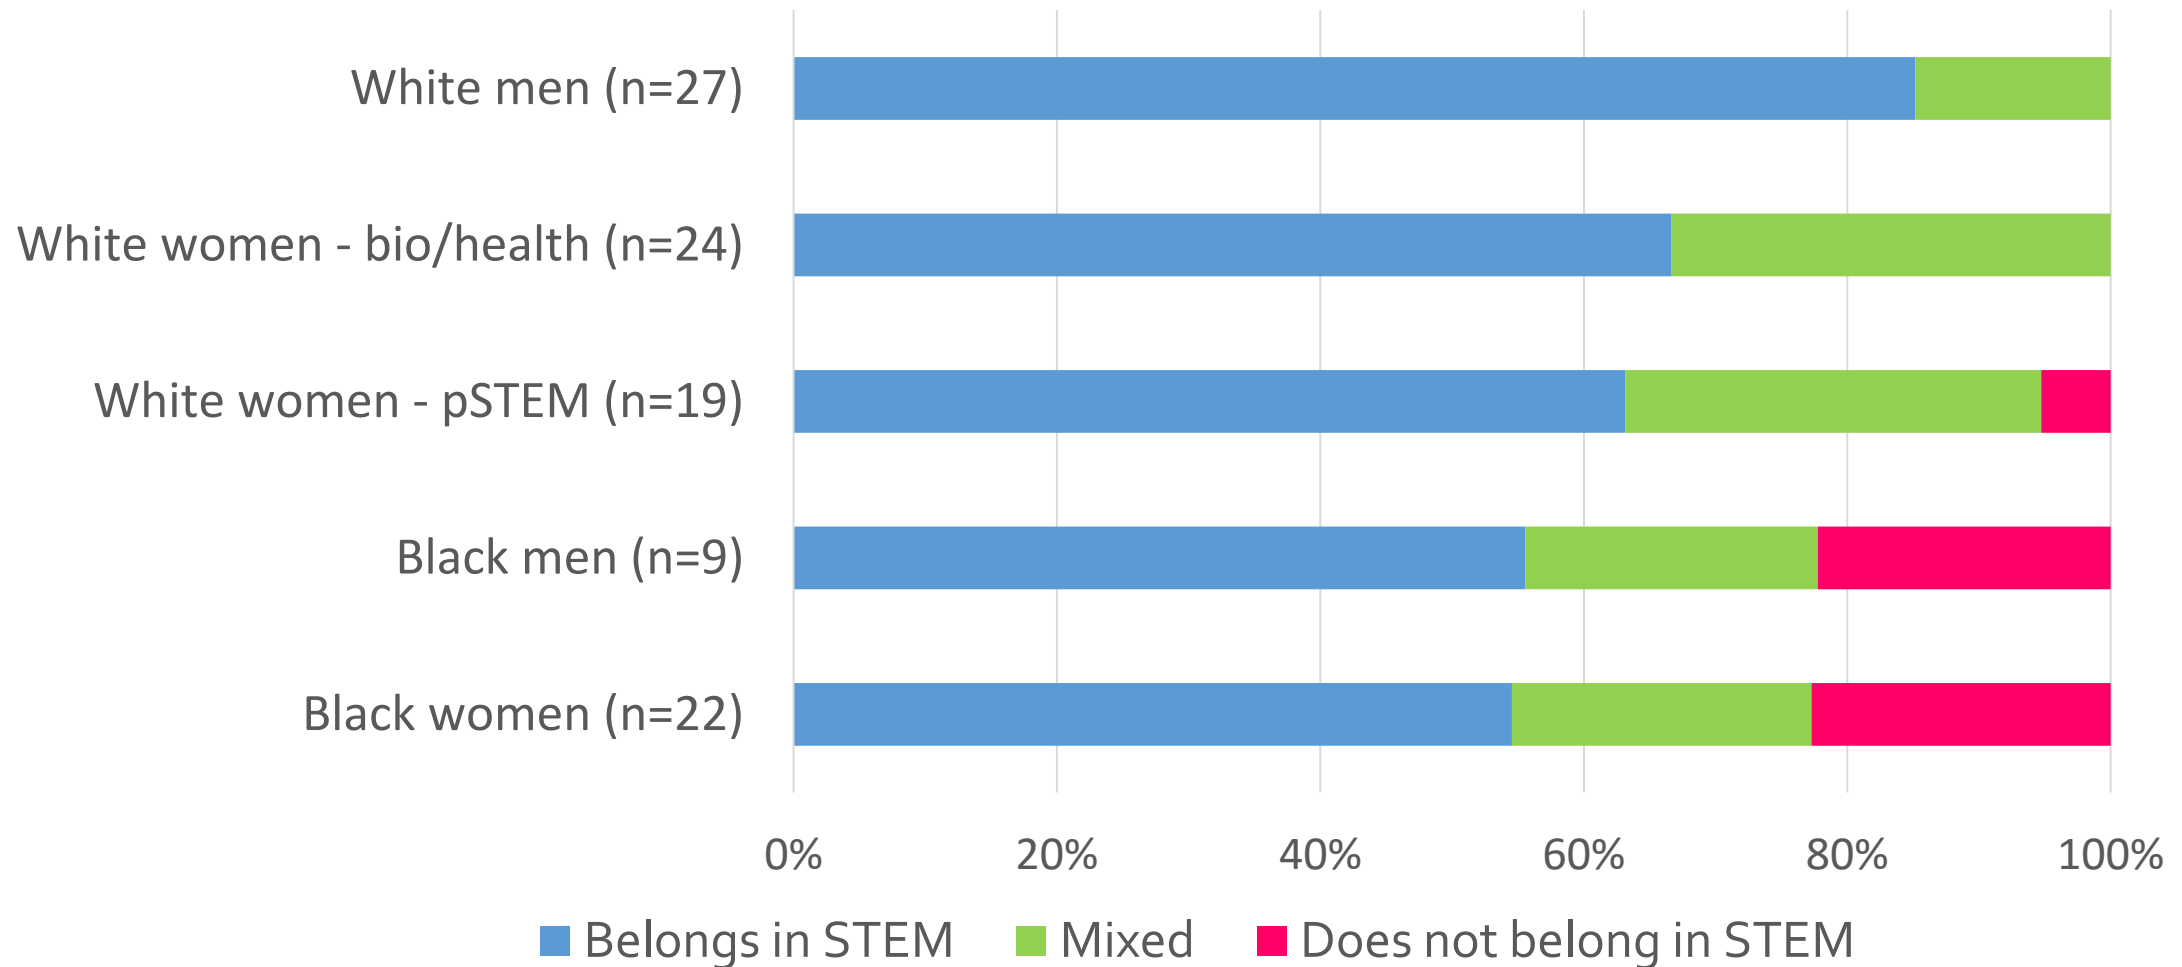

Lacks understanding

"I feel out of place because I think [other majors] know more than I do."

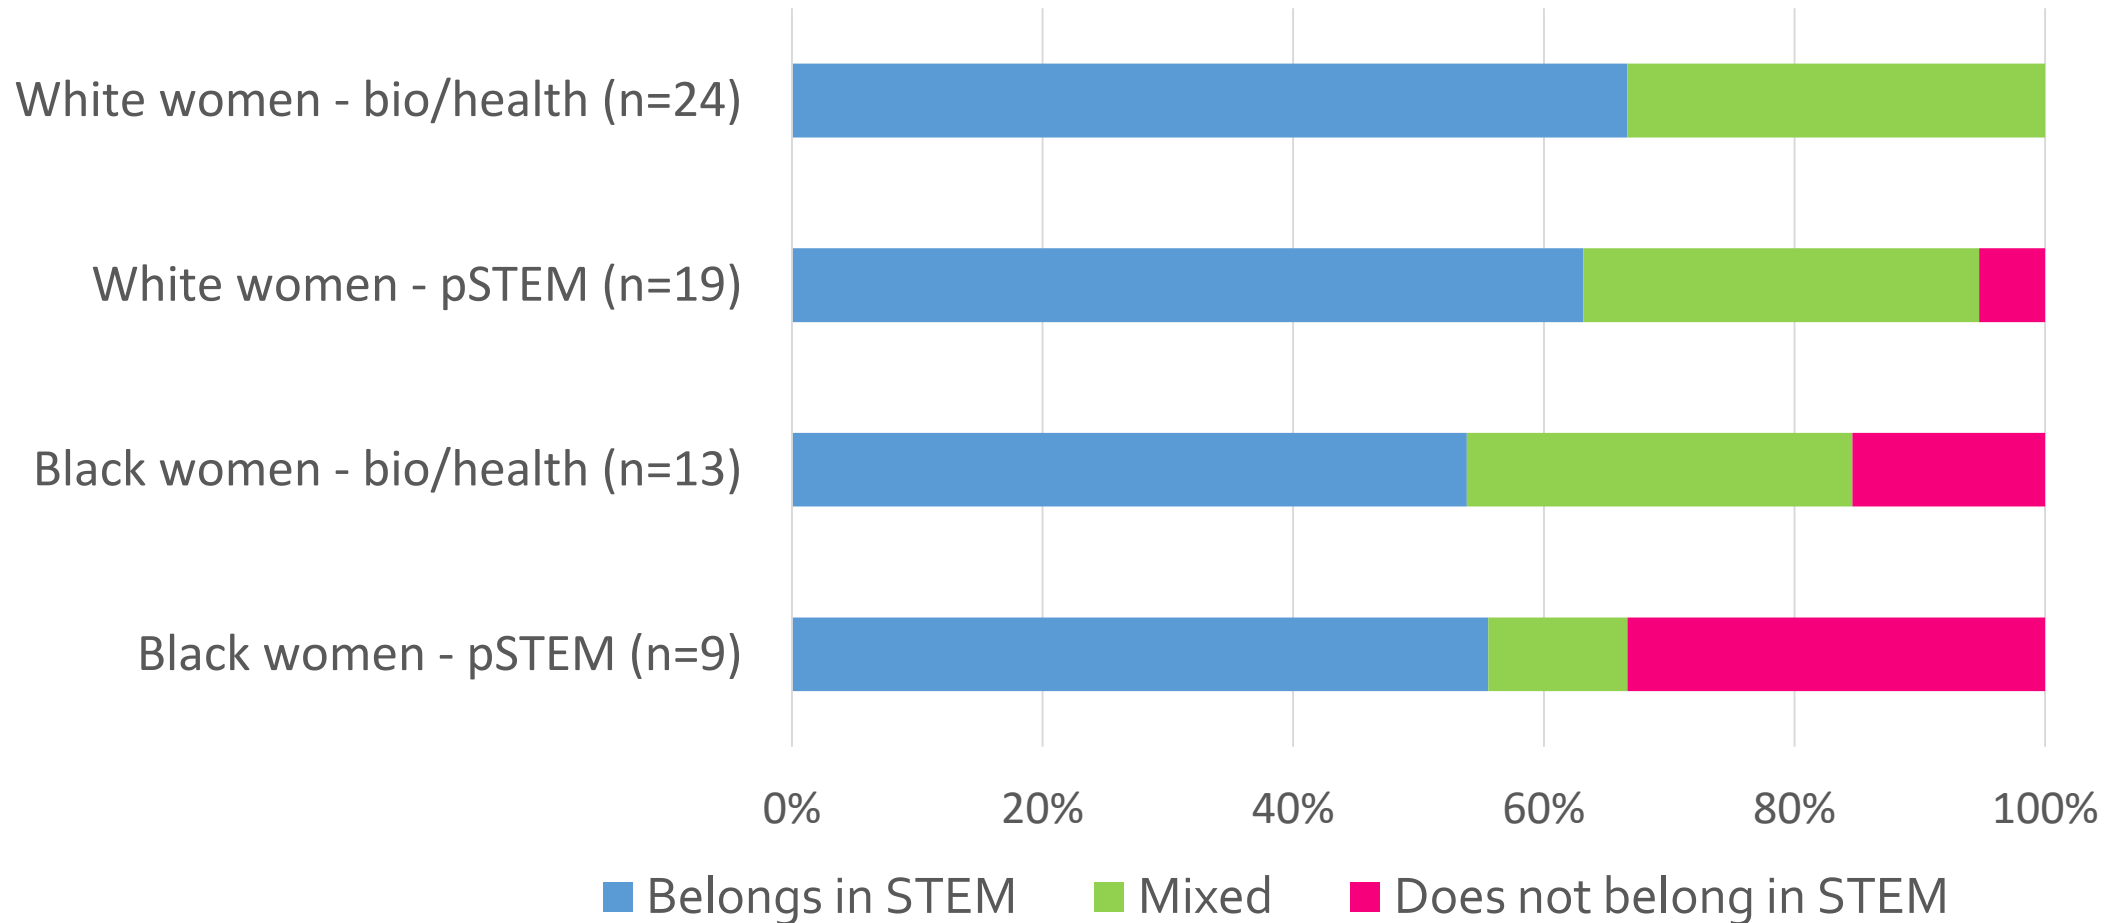

Belonging by gender & race

Belonging by representation in major

Belonging by representation of women in major

Belonging by representation

Discussion

- White men report the highest sense of belonging: **100% of white men reported feeling they belonged in their STEM major.**
- **Black students have the lowest reporting of belonging.**
- Women are more likely to have mixed responses about their sense of belonging than men are.
- Differences between women's sense of belonging is *dependent on representation of women in their major.*

Representation in one's major, based on both race and gender, has an impact on sense of belonging.

When considering belonging of students in STEM, analysis based on both **gender *and* race** must be used.
